Jessica,

The latest update on our end: based on our last inspection, and the results of pressure monitoring collected this month, we plan on issuing a Notice-of-Deficiency Letter to the Owner this week covering the following:

- Lack of source redundancy (second well or second source)
- Lack of redundant chemical feed pump/equipment
- Distribution system main size (appears to be 1") inadequate to meet system demand
- Hydropneumatic tank and/or well pump undersized and incapable of meeting system demand

As for the site visit, let me know when they plan on being on-site. We would love to meet up.

John

Good morning everyone-

I just wanted to provide an update on the Mr. Falco response from our end. Jerry had asked Ken Aubuchon to include this site in his next trip to Baton Rouge which is happening this coming week. He will mainly be looking at the wastewater side of things and has coordinated with Margaret Parker of LDEQ for the wastewater inspection. I wanted to introduce him to John and Jacinta since they have been on site doing the drinking water inspections and follow up. If you have any information for Ken that will help us aid in the work already in progress with this site (he has been copied on all of the recent updates you have provided) please let him or I know. Also, please let him know if you would like to be on site for his inspection so everyone can work out a time. Let me know if anyone has any questions or needs anyone's contact information!

Thanks,

Jessica Moore

Subject: RE: Check-In re: Country Club Trailer Park (LA1103010)/Mr. Falco

Jessica,

A site visit was performed on December 13th. Chlorine residuals and pressure readings were taken at the well and at the MRT; chlorine residuals and pressure readings were found to be in compliance. The pressure recorder was reinstalled, where it remains collecting data. We plan on pulling the pressure logger this month for data review. If Mr. Falco has complained of loss-of-pressure events, please provide the dates so we can compare complaints to recorded data.

The chemical feed pump was grossly oversized, making it very difficult to achieve a consistent chlorine dose. A Notice-of-Deficiency on the pump has been issued.

We arranged for the owner, Frank Mangano, to meet with Timmy Lemoine, Circuit Rider with Louisiana Rural Water Association, with the expectation that technical assistance would be provided. Mr. Mangano canceled the meeting at the last minute.

Jen-

Mr. Falco is continuing to call our office so I wanted to follow up on this case. Were you all able to reinstall the pressure meter discussed below? Or have there been any additional updates regarding inspections on this case? He generally calls and leaves messages for all of our upper management so I just wanted to make sure I had the latest information to pass on to them.

Thanks,

Jessica

Jie and I were able to make a site visit to Country Club yesterday.

I contacted the operator at 2:30 pm to meet us at 3:30 pm, he was unable to meet us and was not able to have a representative meet us. We will be issuing a violation due to inability of the operator to respond within one hour.

We were able to speak to several tenants, there were inconsistencies regarding the pressure reports for Sunday, December 11, 2016.

Of the 8-10 tenants that we were able to speak to, about 50% stated that there was a loss of pressure (down to a trickle) on Sunday and 50% stated that they did not experience any problems.

I was not able to determine a pattern or line issue that could contribute to the inconsistencies in reports. None of the tenants were willing to give their names or contact information due to fear of retaliation from the landlord.

The pressure yesterday was consistently 25-30 psi throughout the park.

I have an appointment with the operator/landlord at 1 pm to reinstall the pressure recorder at the well site. It will be left there until we are able to determine the cause of the problems and ensure corrective actions have been effective.

Hi John and All –

So Jim received another call from Mr. Falco summarized below after I provided him your update – thank you:

This is exactly what Mr. Falco told me today when I spoke with him. He said there was a pressure drop on Sunday, 12/11/2016, below 10 psi. He's pleading for someone to come out and inspect the water system even though he's been evicted recently and doesn't live there anymore.

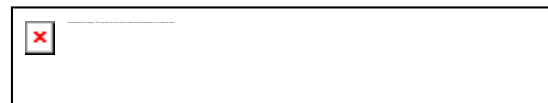

So, can Jacinta or whoever can, please provide an update after her visit this afternoon?

Thank you,
Amy

Jacinta reported today that they have received complaints of a loss of pressure incident that occurred yesterday morning. Jacinta has a secured pressure recorder in place at the well. She plans on investigating the complaint tomorrow. The pressure recorder should tell us if a loss in pressure did occur, and if so, how significant it was. We will keep you posted on what we find.

I spoke to Mr. Mangano, the operator, yesterday. He has not made contact with LRWA. I am re-forwarding him the contact information today.

Attached please find an email regarding the investigation of the sewage complaint performed by Region 9 San Services. The plant is 25,000 gpd and the current complaint is regarding individual trailer connections. I have only seen evidence of the plant overflowing on November 4, 2016, the plant was pumped out on November 7 and I have seen no issues at the plant since that time.

This is already a permitted public water supply. The 300' is typically for new developments and the code also states you must tie in if you are "legally entitled". St Tammany has its own parish code which is noted below.

There is also a claim from the operator that Mr. Falco is tampering with the breaker. So, there's conflicting information from the operator and the resident.

I will defer to the regional office regarding the Boil Advisory and if samples have been submitted or not to clear the advisory.

This is the code I believe Mr. Falco is referring to.

He cited the 300 feet distance and wonders why the operator, Mr. Mangano, who he believes is not observing regulatory requirements, is allowed to continue to operate the system when they should be tied into a nearby system capable of providing potable water. Mr. Falco is very frustrated that he's been on a boil water advisory since Oct. 27, and nothing in his opinion has been to provide safe drinking water and lift the order.

Subject: RE: Check-In re: Country Club Trailer Park (LA1103010)/Mr. Falco

Amy,

What he is referencing below for Article 4 Section 23-402 is part of the St. Tammany Parish Code of Parish Ordinances. I did find the section in their code. I think he may be misunderstanding the requirement. The mobile home park is a public water system.

B. Connection to Potable Water System Required:

1. Any private person or political entity who/which owns, leases, or otherwise maintains or possesses control of any property which is situated in the unincorporated portion of St. Tammany Parish, and on which there is located a residence, camp, trailer coach, or any other building, structure, or establishment wherein people customarily or occasionally live, work or congregate, shall connect any such premises to a potable water system as may be required for the premises by applicable law.

2. Any private person or political entity who/which owns, leases, or otherwise maintains or possesses control of any property which is situated in the unincorporated portion of St. Tammany Parish, and on which there is located a residence, camp, trailer coach, or any other building, structure, or establishment wherein people customarily or occasionally live, work or congregate, shall, at such person's sole expense, connect any such premises to a public water system if such public water line is situated within three hundred (300') feet of the boundary line of such premises. If such connection is not begun in the time prescribed by notice to the owner, the Parish may connect the premises to the public water system in the manner prescribed by the St. Tammany Parish Code of Ordinances §23-950.12, and assess the connection costs and fees to each owner as also provided therein. The Parish shall have all other remedies for enforcement and collection of connection costs and fees as is provided by applicable law.

Please note we don't enforce Parish Ordinances. I interpret this to mean if I am putting a mobile home on a lot and there is a water system in 300' of my property then I must connect to that water system.

Thanks, Jen.

Subject: Check-In re: Country Club Trailer Park (LA1103010)/Mr. Falco

Good Afternoon Jacinta,

I apologize, I wanted to phone you but I have no voice thanks to laryngitis so I am providing this email. Kim Ngo, my section chief over the Region 6 Drinking Water Program, asked me to follow up with you on several items in regards to water quality concerns with the Country Club Trailer Park (PWS ID#(LA1103010) made by Mr. Falco. Our branch chief, Jim Brown, continues to receive calls from Mr. Falco, with the most recent call received today. Mr. Falco complained to Jim about several issues - the pressure being down again last Friday, November 25th, a continuous slippery feel to the water, and with the recent chemical changes, a strong acidic smell that consumes his trailer that started over the weekend, remains. Does LDH have any updates/information regarding these concerns?

Also, can LDH help clarify the following questions:

- What is the status of an enforcement order? Will one be given to the operator/system?
- Status of LRWA coming out to the system to provide assistance to chlorinate properly? Was a visit conducted yet?
- Did LDH find out anything regarding Mr. Falco's waste water complaint?

Ultimately, EPA management continues to be concerned about the system with allegations being made of the operator, potentially tampering with the system (i.e. pressure), as we know is a criminal activity. The system is still not providing safe, clean water and remains on a BWA. What needs to be done to get this corrected soon, can EPA help? We appreciate your help and feedback as always and thank you Jacinta, for the work you have done with the system.

Sincerely,
Amy C.

Amy
